2

**Amendments to the Specification:**

**Please replace the paragraph beginning on Page 5, line 9, with the following amended paragraph:**

81 For ease of manufacture using standard process equipment, the ~~print head~~ printhead is designed to be a monolithic 0.5 micron CMOS chip with MEMS post processing. For color photographic applications, the ~~print head~~ printhead is 100 mm long, with a width which depends upon the inkjet type. The smallest ~~print head~~ printhead designed is IJ38, which is 0.35 mm wide, giving a chip area of 35 square mm. The ~~print heads~~ printheads each contain 19,200 nozzles plus data and control circuitry.

**Please replace the paragraph beginning on Page 5, line 17, with the following amended paragraph:**

Ink is supplied to the back of the ~~print head~~ printhead by injection molded plastic ink channels. The molding requires 50 micron features, which can be created using a lithographically micromachined insert in a standard injection molding tool. Ink flows through holes etched through the wafer to the nozzle chambers fabricated on the front surface of the wafer. The ~~print head~~ printhead is connected to the camera circuitry by tape automated bonding.

**Please replace the paragraph beginning on Page 7, line 26, with the following amended paragraph:**

82 Other inkjet configurations can readily be derived from these 45 forty-five examples by substituting alternative configurations along one or more of the 11 axes. Most of the IJ01 to IJ45 examples can be made into inkjet ~~print heads~~ printheads with characteristics superior to any currently available inkjet technology.

**Please replace the paragraph beginning on Page 7, line 32, with the following amended paragraph:**

Where there are prior art examples known to the inventor, one or more of these examples are listed in the examples column of the tables below. The IJ01 to IJ45 series are also

*and*  
 listed in the examples column. In some cases, a ~~printer~~ print technology may be listed more than once in a table, where it shares characteristics with more than one entry.

Please replace the Page 36 through Page 42 to with the following amended paragraph:

--Ink Jet Printing

*AE*  
 A large number of new forms of ink jet printers have been developed to facilitate alternative ink jet technologies for the image processing and data distribution system. Various combinations of ink jet devices can be included in printer devices incorporated as part of the present invention. Australian Provisional Patent Applications relating to these ink jets which are specifically incorporated by cross reference. The serial numbers of respective corresponding US patent applications are also provided for the sake of convenience.
